Projects

Banking System
- A banking system written in C is a piece of software that is used to manage various banking activities and transactions.
- It serves as a simple representation of a real-world banking system and allows users to perform basic banking functionalities, such as creating accounts, depositing and withdrawing money, checking balances, and transferring funds between accounts.

Event Management System
- An event management system using Java is a software application designed to streamline the organization and coordination of events, such as conferences, meetings, seminars, weddings, and other gatherings.
- The system facilitates the entire event lifecycle, from event planning and registration to attendee management and post-event analysis.

Home Loan Approval Analysis
- Home loan approval using Orange refers to the process of utilizing the data mining and machine learning tool, Orange, to analyze and predict the likelihood of a home loan application being approved.
